

Project: Generation of nanobodies against immunomodulating checkpoint receptors in glioblastoma tumor cells

Project duration: 2020 - 2022

Coordinator: Leuven Catholic University (KU), Translational Cell & Tissue Research (Prof. Dr. Frederik De Smet)

Project manager at UL FFA: Prof. Dr. Robert Rožkar

Project manager at UL MF: Prof. Dr. Ivana Jovchevska

Project summary:

Goal of the project »Generation of nanobodies against immunomodulating checkpoint receptors in glioblastoma tumor cells« is to obtain nanobodies against the most commonly expressed immunomodulatory receptor checkpoints in glioblastoma tumor cells. The research team from UL (MF and FFA) will enrich, isolate and characterize the new nanobody.
